

**In the Claims:**

This listing of claims replaces all prior versions and listings of claims:

1. (Currently amended) A print terminal comprising:

an image-capturing unit for ~~capturing~~ receiving image data and outputting captured image data;

a first rotation-processing unit for ~~rotating~~ creating a print image ~~to be used in printing the image data captured by the image-capturing unit~~ rotating the captured image data by a rotation angle, said rotation angle being selectable within a range of one to ninety degrees;

a second rotation-processing unit for controlling an orientation of a print medium relative to the print image by rotating a print-medium image ~~to change the orientation of a print medium to be used in printing the image data captured by the image-capturing unit;~~

and a third rotation-processing unit for simultaneously rotating both the print image and the print-medium image.

2. (Original) The print terminal according to claim 1, wherein the third rotation-processing unit rotates the print image and the print-medium image by 90 degrees.

3. (Currently amended) The print terminal according to claim 1, wherein the first rotation-processing unit ~~rotates the print image by 90~~ is adapted to correct a tilt of the captured image data by rotating captured image data by a rotation angle less than ninety degrees or less.

4. (Currently amended) The print terminal according to claim 1, further comprising a reader for reading the image data from a recording medium, wherein the image-capturing unit ~~captures the~~ receives image data read by the reader.

5. (Currently amended) A print system comprising: a print terminal ~~including~~ comprising an image-capturing unit for ~~capturing~~ receiving image data and outputting captured image data; a

first rotation-processing unit for creating a print image by rotating a print image to be used in printing the image data captured by the image capturing unit the captured image data by a rotation angle, said rotation angle being selectable within a range of one to ninety degrees; a second rotation-processing unit for controlling an orientation of a print medium relative to the print image by rotating a print-medium image to change the orientation of a print medium to be used in printing the image data captured by the image capturing unit; and a third rotation-processing unit for simultaneously rotating both the print image and the print-medium image; and a printer for printing the print image data processed by the print terminal on the print medium.

6. (Canceled)

7. (Currently amended) A program for enabling computers to implement the functions computer-readable storage medium storing a program, the program comprising the steps of:

an image capturing function for capturing image data; a first rotation processing function for rotating creating a print image to be used in printing the image data captured by the image capturing function rotating captured image data by a rotation angle, said rotation angle being selectable within a range of one to ninety degrees;

a second rotation processing function for controlling an orientation of a print medium relative to the print image by rotating a print-medium image to change the orientation of a print medium to be used in printing the image data captured by the image capturing function; and

a third rotation processing function for simultaneously rotating both the print image and the print-medium image.
